### Camp Provides Sickle Cell Patients with New Hope

ATLANTA (August 2, 2010) &ndash; More than 150 students will spend six days at Camp New Hope, a recreational and educational experience designed for children ages 6 to 17, who have sickle cell disease. From Sunday, August 1st until Friday, August 6th, the residential camp provides children an opportunity to come together to participate in interactive learning experiences such as boating, canoeing, hiking, horseback riding, and arts and crafts in a medically supervised camping environment at Camp Twin Lakes located in Rutledge, Georgia. ### What do your Results Mean?

Sickle Cell Anemia, Sickle Cell Trait, and other hemoglobin variants can be identified by special laboratory test. These tests identify hemoglobin, which is the substance inside red blood cells.

Breaking the Sickle Cell Cycle through Knowledge, Help and Hope.

Since 1971, the Sickle Cell Foundation of Georgia, Inc. has stood as a bastion of hope for victims of Sickle Cell and other hemoglobin abnormalities. Dr. Delutha H. King, Jr. and the late Dr. Nelson McGhee, Jr. founded the organization to monitor Sickle Cell occurrences, share and advance knowledge and research with other organizations and, of course, improve the quality of life of those battling the disease.
